

PharmaScan®

**The partner
in your clinical trials**

PHASES I TO IV

Clinical studies in Poland

PharmaScan, your clinical studies partner for more than 10 years in Dermatology, Ophthalmology, Gynecology and Dental, is now able to conduct your clinical trials in Poland.

For more than 10 years, we have been providing you with CRO clinical studies across France. This is because we cooperate with many investigators, which in turn are supported and coordinated by opinion leaders benefiting of an international recognition.

PharmaScan provides you with a 2,000 m² Investigation Center dedicated to Phase I to IV studies, which is well-suited for prescription drugs and equipped with a state-of-the-art infrastructure.

The site also benefits from a call center and a database of 35,000 healthy volunteers and patients, classified according to 150 medical criteria.

Collaboration with the CRO Procos

Already internationally focused (20% of company revenues come from exports), PharmaScan is now able to conduct your clinical trials in Poland, thanks to its cooperation with **PROCOS**, a **CRO located in Warsaw**.

A presence in Eastern Europe provides you with **lower fees** and **optimized completion time**, together with a very favorable environment:

- > Trained doctors, fully schooled in GCP and ICH norms, are very interested in participating in clinical studies, which are also a means to access the latest treatments.
- > Patients, still in low demand and very motivated, are not clinical trial "regulars" and have little or no exposure to prescription drugs, before studies are put into place.
- > Recruitment and compliance are thus facilitated, which represents an undeniable edge to pharmaceutical laboratories.

PROCOS benefits from several years of experience in our fields, especially in that of Dermatology. The company also has a local team of Clinical Research Associates, coached and managed in cooperation with PharmaScan.

The progress of clinical studies, data gathering and the latest information related to the trials are centralized in Lyon and monitored by our project managers, who remain your primary point of contact.
